

- Version: 4.2f
- Released: Tuesday 10th May 2011
- Data compatibility: 3.7, 4.0 and 4.1 (Older versions will need to be assisted by Support)

Key Features

BankLink Import

Transactions coded in BankLink to accountant's general ledger codes can now be loaded automatically - using Cashmanager RURAL "Accountants codes" mapping.

This feature will be especially useful where farmers want to maintain a budget but not the Cashbook.

- No duplication of coding effort
- Farmers or Accounting technicians can import
- See the [BankLink Import instructions](#) document for more details.

Insert Transaction Line

Within an existing transaction, the right click menu has a new Insert Line option. The line is added below the current line (depending on where the mouse was pointing at the time) as a split transaction.

Split Transaction

When you split an existing transaction, the new transaction line it creates now appears directly below the selected line.

Import of Bank or Trader Transactions

The Load Bank or Trader transactions [menu](#) has been simplified.

- Setting up Online banking is easier
- CRT has been added to the list of Trader Imports. The file type to save from CRT is CSV.
- BankLink added

Professional Licensing

Professionals may apply to CRS Software Ltd for a 'Practice License' that extends their ability to edit any database beyond the existing 28 day period.

Restore

The restore process has been upgraded to make it easier to navigate around folders and external drives (eg USB sticks). to find the file to restore.

Super Schedule (Australian Databases Only)

It now displays the correct date.
